

Automatic Backwashing Filtration System

NEW

DN50

Installation diagram-1

Installation diagram-2

Exceptional Stability

Automatic backwashing valve opens via air pressure and closes under spring force.

The "AQUA" valve automatically reverts to filtration position during electrical failures, preventing unintentional pool drainage.

No pump shutdown required when switching between filtration and backwashing modes.

Operating pressure: 3.5-6.0 bar.
Pipe diameters: DN40/D50 to DN125/D140

- Anti-sand jamming
- Electric leakage protection
- Robust durability
- Stable performance

* Compatible with all side-mounted sand filters
